Portfolio: <https://nurbukeydin.github.io/>

PROFESSIONAL SUMMARY

iOS and mobile-focused Computer Engineering student with hands-on experience in Swift, SwiftUI, SwiftData, and Combine, alongside a strong interest in database design using SQL and PostgreSQL. Built StudyFlow, a native iOS productivity app with local data persistence and a reactive SwiftUI interface, and co-designed a relational database system for university club and event management, applying normalization, primary-foreign key relationships, and query optimization.

Eager to grow as an iOS and mobile developer on real-world products - quick to pick up new frameworks and APIs, take feedback, and write clean, maintainable code. Most recently interned at Microsoft building a Retrieval-Augmented Generation pipeline, reflecting a growing interest in applying AI on top of solid mobile development and database fundamentals.

EDUCATION

B.Sc. in Computer Engineering, Doğuş University

2022 - 2026

- 50% Scholarship

PROFESSIONAL EXPERIENCE

AI Innovators Summer Internship, Microsoft

June 2026 - July 2026

- Built a Retrieval-Augmented Generation (RAG) system that paired semantic search with LLM-based generation, lifting response relevance by 65%.
- Streamlined the document ingestion pipeline, covering chunking, embedding generation, and vector indexing, which cut retrieval latency by around 70%.
- Worked closely with mentors to refine prompt design and evaluate output quality across multiple test scenarios.

Codit Technology, IT Intern

Jul 2025 - Aug 2025

- Conducted research and hands-on testing on virtual machine setup, configuration, and cloud technologies.
- Wrote and optimized SQL queries for data insertion, updates, deletions, and database management.
- Explored enterprise cloud computing concepts while gaining practical experience with virtualization and database systems.

LEADERSHIP EXPERIENCE

DOU Mühendis Beyinler Kulübü

2022 - 2026

Board Member | Vice President (October 2025 - August 2026)

- Lead planning and execution of technology-focused workshops, seminars, and networking events.
- Coordinate speaker communications, event logistics, and cross-team collaboration to ensure successful event delivery.
- Organized hands-on workshops on emerging technologies, including Robotic Process Automation (RPA) and Android Development with Gemini AI.
- Support strategic planning and participate in executive-level decision-making.

Board Member | General Secretary (January 2025 - October 2025)

- Managed official correspondence and organizational processes for one of the university's largest technology events, Engineers Talk.
- Prepared sponsorship proposals and maintained professional communication with industry partners.
- Organized technical visits with leading companies to strengthen industry engagement for students.
- Collaborated with guest speakers and executive board members to coordinate successful events.

PROJECTS

StudyFlow - iOS Productivity Application

Technologies: Swift, SwiftUI, SwiftData, Combine, Apple Charts

- Developed a native iOS productivity application that combines task management, calendar-based planning, Pomodoro focus sessions, and study progress tracking.
- Implemented local data persistence with SwiftData to store tasks, courses, user preferences, and completed focus sessions.
- Built a productivity dashboard featuring weekly focus statistics, daily goals, achievement tracking, and visual progress insights.
- Designed a reusable and adaptive SwiftUI interface using modular components and reactive state management.

GitHub: github.com/nurbukeaydin/StudyFlow

University Club and Event Management System

Technologies: PostgreSQL, pgAdmin

- Collaborated in a four-member team to design and develop a university club and event management database system.
- Designed a relational database structure for managing university clubs, members, events, and participation records.
- Developed and executed complex SQL queries for data insertion, update, deletion, and reporting to ensure data integrity.
- Applied fundamental database concepts including normalization, primary-foreign key relationships, and JOIN operations.

AI Vision Assistant

Technologies: Kotlin, Jetpack Compose, Google Gemini API, MVVM

- Developed a native Android application powered by Google's Gemini 1.5 Flash model to perform multimodal image analysis using text prompts.
- Implemented MVVM architecture, Coroutines, and Flow for efficient handling of asynchronous network operations and API integrations without blocking the UI thread.
- Designed a reactive UI using Jetpack Compose, managing complex UI states dynamically via mutableState observables.

SKILLS

Programming Languages: Swift, Java, Python, C++, C

Mobile Development: SwiftUI, SwiftData, Combine, Apple Charts, Kotlin, Jetpack Compose

Web Development: HTML, CSS, JavaScript, React

Databases: SQL, PostgreSQL

Tools: Git, GitHub, Xcode, VS Code

LANGUAGES

Turkish: Native

English: B2

CERTIFICATES

Python 101 - Turkcell Geleceği Yazarlar, February 2025

Python 201 - Turkcell Geleceği Yazarlar, February 2025

Python 301 - Turkcell Geleceği Yazarlar, February 2025

Python 401 - Turkcell Geleceği Yazarlar, February 2025

Versiyon Kontrolleri: Git ve GitHub - BTK Akademi, July 2026

Prompt Mühendisliği - BTK Akademi, July 2026
