SUMMARY I am a senior Computer Engineering student with a strong interest in developing user-focused and scalable software solutions, particularly in iOS application development and database systems. I am deeply interested in artificial intelligence technologies and actively keep up with the latest advancements in the field. By continuously strengthening my technical background through research and hands-on experience, I aim to contribute to the industry by applying my analytical thinking and problem-solving skills through internships and collaborative projects.

EDUCATION **Doğuş University | 2022 - Present**
Computer Engineering (English)(50% Scholarship)

SKILLS

- Intermediate:** SQL, Java, Python, C++
- Fundamental:** SwiftUI, Web Technologies(HTML, CSS, JavaScript), React, Kotlin, C

PROJECTS **PUniversity Club and Event Management System | PostgreSQL, pgAdmin**

- Collaborated within a 4-person team as part of a university Database course to deliver a comprehensive management solution.
- Designed a relational database structure for managing university clubs, members, events, and participation records.
- Developed and executed complex SQL queries for data insertion, update, deletion, and reporting to ensure data integrity.
- Applied fundamental database concepts including normalization, primary-foreign key relationships, and JOIN operations.

Custom Unix Utilities & xv6 Kernel Modification | C, Linux System Calls, Makefile

- Partnered in a 2-person team to design a custom command-line interpreter (wish) and file utility (wcat) in a Unix/macOS environment to explore system architecture.
- Engineered process management structures using system calls such as fork(), exec(), and wait() to handle parallel command execution safely.
- Implemented core shell mechanisms, including argument parsing and output redirection, in pure C.
- Modified the xv6 kernel by successfully implementing a getreadcount system call to track read operations.

AI Vision Assistant / Multimodal Image Analysis App | Kotlin, Jetpack Compose, Google Gemini API, MVVM

- Developed a native Android application integrating Google's Gemini 1.5 Flash model to perform multimodal analysis, processing multiple user-uploaded images with text prompts.
- Implemented MVVM architecture, Coroutines, and Flow for efficient handling of asynchronous network operations and API integrations without blocking the UI thread.
- Designed a reactive UI using Jetpack Compose, managing complex UI states dynamically via mutableState observables.

EXPERIENCE

Codit Technology | IT Intern | Jul 2025 - Aug 2025

- Conducted research and hands-on testing on virtual machine setup and configuration.
- Explored cloud technologies, focusing on core concepts and common use cases for enterprise solutions.
- Wrote and optimized database queries using SQL, performing seamless data insertion, update, and deletion operations.

DOU Mühendis Beyinler Kulübü | 2022 - Present

- **Board Member | Vice Chairman (October 2025 - Present)**
 - Served as Vice Chairman of the student club, taking an active role in planning and executing technical workshops and coordinating the academic year's opening organization.
 - Organized hands-on sessions on emerging technologies, including a Robotic Process Automation (RPA) workshop and an Android Development session with Gemini AI Integration.
 - Managed speaker invitations, event logistics, and team coordination to ensure the smooth execution of technology-focused student events.
- **Board Member | General Secretary (January 2025 - October 2025)**
 - Served as General Secretary for "Engineers Talk", the university's largest technology summit, overseeing official correspondence and coordinating organizational processes.
 - Led sponsorship acquisition efforts by preparing and sending sponsorship proposal emails and managing corporate communication with industry partners.
 - Organized technical visits to industry leaders such as Ford Otosan and Cube Incubation, strengthening the connection between students and the professional world.
 - As a member of the Executive Board, maintained direct communication with guest speakers and played an active role in decision-making and operational coordination throughout the planning and execution of events.
- **Committee Member (March 2024 - January 2025)**
- **Member (November 2022 - March 2024)**

LOOP "Yazılım ve Fikir Geliştirme" Takımı | Core Team Member | Dec 2024 - Aug 2025

- Actively contributed to team ideation and software development discussions.

CERTIFICATES

- Python 101
- Python 201
- Python 301
- Python 401

LANGUAGES

- Turkish (Native)
- English(B2)
